CLEAN CAB

DECONTAMINATION AND BIOHAZARD

E-ONE offers a suite of decontamination and biohazard mitigation options that includes SCBA and bunker gear storage outside of the crew area, HEPA air filtration system and easy-to-clean seating. These solutions are designed to help mitigate contaminants inside the cab, promoting a better environment for your crew. Having a variety of choices allows your department to customize the apparatus to meet your department needs and overall mission.

CUSTOM SOLUTIONS FOR A CLEANER CAB ENVIRONMENT.

OVER-WHEEL BUNKER STORAGE

Compartments over the front wheels, at rear side of cab or transverse at rear of cab with only exterior access for storing bunker gear promote a cleaner cab interior.

NON-SCBA SEATS WITH ANTI-MICROBIAL COVERS

Non-SCBA seats to help prevent contamination from air packs entering the cab. Seating surfaces that promote a cleaner environment inside the cab include vinyl, which is easy to wipe down, or fabric with an anti-microbial and anti-pathogenic protective barrier.

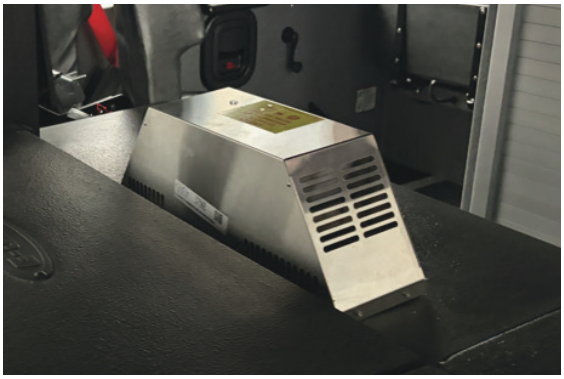

GROSS DECONTAMINATION OUTLET

A 3/4" inch GHMT (garden hose) outlet on the pump panel, plumbed from the pump, provides a pressure-regulated and temperature-controlled water supply for gross decontamination of firefighters.

HEPA FILTRATION SYSTEM FOR CAB INTERIOR

Located in the crew area of the custom cab, the HEPA air filtration unit circulates the air and removes particulates. A separate HEPA unit results in no loss of performance with the cab HVAC system.

USSC ACTIVE AIR

Designed with advanced Photohydroionization® (PHI Cell) and UV technology, the Active Air Purification System kills 99% of pathogens, including the virus which causes COVID-19, in the air and on surfaces, delivering better air quality and a safer cab environment for your crew.
